

**Figure 1**

Figure 1 consists of two panels, A and B, showing histograms of the number of non-zero elements in the sparse matrices  $\tilde{A}$  and  $\tilde{B}$ , respectively. The x-axis for both panels is labeled "Number of non-zero elements" and ranges from 0 to 100,000. The y-axis is labeled "Frequency" and ranges from 0 to 10.

Panel A shows the distribution for  $\tilde{A}$ . The histogram has a peak frequency of approximately 9 at around 20,000 non-zero elements. There are smaller peaks at approximately 60,000 and 80,000 non-zero elements.

Panel B shows the distribution for  $\tilde{B}$ . The histogram has a peak frequency of approximately 9 at around 20,000 non-zero elements. There are also smaller peaks at approximately 60,000 and 80,000 non-zero elements.
